About this project

Like

0

The E-commerce Product Uploader project is a simple web application designed to allow users (especially vendors or admins) to easily upload and manage product listings for an e-commerce platform. The project focuses on creating an intuitive and user-friendly interface where users can enter product details such as the product name, description, price, category, image, and other relevant information. The primary goal is to simulate a basic admin panel functionality for adding products to an online store.
